Quarterly Report on

<div style="background:red">Data Management Protocol</div>

April – June 2015

1

During the first three months of the project, the team has completed the following tasks:

- **To plan a data management protocol** following the European standards regarding privacy and personal data transfer security. These protocols have been approved by the Clinical Research Ethical Committee of the Parc de Salut Mar (CEIC - Parc de Salut Mar). The data privacy procedures have also been approved by UPF's Infraestructure and Security Manager. To protect participant's privacy, any personal data collected during the research will be put in a secure place and in a safety digital file that no-one but the researchers will be able to handle it. Personal data will not be shared with or given to anyone outside the research group. Personal data will be destroyed after the research (April 2018).

- **To define an ethnographic approach** to the research that involves the application of qualitative methodologies for data collection such as questionnaires, workshops, interviews and online participant observation.
